1,344 km²

Municipal Assembly published area

1,572 km²

Greater London Authority published area

85.5%

Jomoro is about 85.5% of Greater London's area.
London is 228 km² larger - approximately 17%.

How to read the maps. North is up. Each outline retains its source proportions and is scaled so its filled area matches the published area ratio. This is an area-normalised illustration, not a surveyed map at a common geographic scale.

Boundary sources. Jomoro: approximate vector trace of the yellow district in the supplied Tetteh et al. reference (Ghana districts, 2013). London: GLA boundary, official London GIS service, simplified. The older Jomoro budget figure of 1,494 km² is not used here.

Area sources: Jomoro Municipal Assembly; GLA, State of London 2026. References on page 8.

Executive Summary

Jomoro is a strategically positioned constituency/municipality in the southwestern part of Ghana's Western Region. It borders Côte d'Ivoire to the west and the Gulf of Guinea to the south. Its location, agricultural base, coastal assets, traditional heritage and proximity to the Petroleum Hub create a broad platform for investment and development.

This profile is designed as a foundation document for investor discussions, development planning, stakeholder engagement and opportunity identification. Administrative and population figures can vary by boundary and projection methodology, so figures should be tied to the specific planning or electoral boundary being used.

1. Geographic & Administrative Profile

Jomoro covers approximately 1,344 km² according to the current Jomoro Municipal Assembly website and accounts for about 5.6% of the Western Region's land area. It borders Wassa-Amenfi and Aowin-Suaman to the north, Ellembelle to the east, Côte d'Ivoire to the west and the Gulf of Guinea to the south. The municipal capital is Half Assini. The Assembly's 2023 Composite Budget used a different administrative figure of 1,494 km² and projected the municipal population at 134,153 for 2023. This illustrates why future investment studies should state the source and geographic definition of every statistic.

2. Communities & Local Governance

The municipality is organized around ten zonal councils: Half Assini, Dwenye, Takinta, New Town, Bonyere, Mpataba, Beyin, Tikobo No. 1, Tikobo No. 2 and Elubo. The Assembly reports 29 electoral areas and a 51-member Assembly structure in its FAQ/budget materials. Key population and commercial centres include Elubo, Half Assini, Tikobo No. 1, Tikobo No. 2, Bonyere and Beyin. Elubo is particularly significant because of its border position with Côte d'Ivoire.

3. Economy

Sector	Key opportunity
Agriculture	Coconut, oil palm, rubber, cocoa, cassava, plantain, maize and rice
Gold mining	Responsible mineral exploration and, subject to verified mineral rights and permitting, licensed gold-mining and related services
Fishing	Marine/freshwater fishing, cold storage and fish processing
Border trade	Elubo logistics, warehousing, distribution and commercial services
Tourism	Beaches, cultural heritage, eco-tourism and historical attractions
Petroleum	Supply, logistics, engineering, accommodation and industrial services linked to the Petroleum Hub

4. Agriculture & Agro-Processing

Agriculture is a core economic activity. The Assembly identifies coconut, oil palm, rubber and cocoa as important cash crops, while cassava, plantain, maize and rice contribute to food production. The 2023 Composite Budget stated that agriculture employed approximately 65–70% of the labour force. The most compelling investment pathway is value addition: coconut oil, coconut water, coconut milk/flour and cosmetics; cassava flour and starch; palm-oil processing and soap/cosmetics; and cocoa aggregation and processing. Storage, farm logistics, extension services and access to finance are important enabling investments.

5. Gold Mining & Mineral Development

Jomoro can be considered within the wider mineral-development context of Ghana's Western Region. Potential investment pathways include responsible exploration, licensed gold extraction, mining services, equipment maintenance, logistics, employment and skills development, subject to verified mineral rights, environmental and community requirements. The supplied Jomoro profile does not establish a commercially proven gold deposit or specific concession within the municipality; any gold project, resource estimate or concession claim should therefore be independently verified before investment.

6. Fisheries & Coastal Economy

Fishing and farming remain major livelihoods, but the Assembly reports pressure on fisheries from declining fish stocks and destructive practices. Opportunities therefore include responsible aquaculture, fish processing, cold-chain facilities, ice plants, improved landing-site services and fisheries management.

7. Tourism & Culture

Jomoro has coastal landscapes, beaches, cultural traditions and historical/ecological attractions. The Assembly highlights Ankasa National Park, Nzulezo, Apollonia Fort, the Osagyefo Barge, Abby Lagoon and Jomoro beaches among attractions. The annual Kundum festival is an important cultural institution. A destination strategy could combine beach tourism, cultural experiences, eco-tourism, local food, heritage sites, events and community-based tourism rather than relying only on conventional hotel development.

8. Petroleum & Industrial Opportunity

The Jomoro Municipal Assembly reported engagement with the Petroleum Hub Development Corporation in April 2026 regarding updates on the Petroleum Hub project. This creates a potential ecosystem for logistics, accommodation, engineering, construction, security, ICT, warehousing, transportation, environmental services and equipment supply.

9. Infrastructure & Development Challenges

The 2023 Composite Budget reported 150.1 km of feeder roads and stated that 41% of the roads were unmotorable, with particular difficulties in the northern part during the rainy season. The Assembly also identifies constraints including limited access to credit, storage shortages, agricultural productivity challenges, education/infrastructure gaps and pressure on coastal livelihoods.

10. Investment Opportunity Pipeline

Priority area	Illustrative project
Coconut	Integrated coconut processing and export centre
Mining / gold	Gold exploration/mining and related services, subject to verified mineral rights and permitting
Border economy	Elubo logistics, warehousing and distribution hub
Agro-processing	Multi-crop aggregation, processing and cold storage
Fisheries	Fish processing, ice plant and cold-chain facility
Tourism	Coastal resort/eco-tourism and cultural destination
Petroleum services	Local supplier and industrial services hub
Digital economy	ICT, cybersecurity, digital-skills and remote-work centre
Energy	Commercial solar and resilient power solutions
Healthcare	Diagnostic and community healthcare facilities
Skills	Technical/vocational training centre linked to local industries

11. Strategic Development Concept: Smart Jomoro

A technology-led development programme could connect security, connectivity, agriculture, education and municipal services. Potential components include CCTV and community safety systems; public Wi-Fi and digital centres; GIS and digital municipal services; farmer registration and market information; cybersecurity and AI training; and remote-work skills.

12. Stakeholder Map

Key stakeholder groups include the Jomoro Municipal Assembly; traditional authorities and community leaders; Member of Parliament and constituency structures; Petroleum Hub Development Corporation; agricultural and fisheries agencies; businesses and investors; schools and health institutions; youth and community organizations; and cross-border commercial stakeholders.

13. Recommended Next Research

For an investor-grade feasibility report, the next stage should add: community-by-community population data; verified 2024 parliamentary and presidential results; land and zoning information; existing industrial and tourism assets; road/port/border logistics mapping; agricultural production volumes; petroleum-hub project details; schools and health facilities; land ownership/lease considerations; utility availability; and a financial model for each priority project.

Source Notes

Primary sources used include the Jomoro Municipal Assembly official website, its 2023 Composite Budget, its current location/profile pages, current Assembly information and official 2026 news updates. Key references include the Assembly's About, Location & Size, Documents and MP pages.

Important: This is a research and planning document, not a legal, investment, land-title, geological, engineering or financial due-diligence report. Before committing capital, investors should independently verify land rights, permits, environmental requirements, project economics, government approvals and current market data.
